PROFESSIONAL SUMMARY

Java Software Engineer & Final-Year Computer Science Student (Cairo University, expected 2026) with hands-on experience building secure, scalable web applications using the Spring ecosystem and Jakarta EE. Proven ability to architect multi-module MVC systems, engineer custom data-access layers, and implement application-level authentication and authorization. Complementary full-stack experience (React, Node.js, Next.js) gained through engineering internships and production-grade projects. Strong foundation in clean code, SOLID principles, and test-driven reliability using JUnit and Mockito. ICPC ECPC 2024 Honorable Mention recipient.

SKILLS

Core Languages: Java (primary), C++, C, Python

Backend: Spring Boot, Spring MVC, Spring Security, Jakarta EE (Servlets, JSP), RESTful APIs, Hibernate, JDBC, Node.js, Express.js

Frontend: React, React Native, Tailwind CSS, Redux Toolkit, HTML, CSS, JavaScript

Databases: MySQL, Oracle SQL, PL/SQL, MongoDB, Firebase Firestore

Testing & Quality: JUnit, Mockito (Unit & Integration Testing)

Tools & Platforms: Git, GitHub, Docker, Maven, IntelliJ IDEA, Postman, Firebase Auth/Storage, Expo

CS Fundamentals: OOP, Data Structures & Algorithms, SOLID Principles, DAO Pattern, Design Patterns, SDLC, Agile, Problem Solving

EXPERIENCE

Software Engineering Intern — DevWave, Cairo, Egypt

July 2025 – August 2025

- Completed a front-end training track (HTML/CSS, Tailwind CSS, JavaScript) culminating in a solo capstone and a team project.
- Independently architected and shipped **B_Laban**, a full-featured dessert e-commerce platform (React, Firebase Firestore/Auth, Resend API, Cloudflare Functions) — implementing OAuth, a full cart-to-checkout flow, and automated order emails, deployed live on Cloudflare Pages ([demo](#)).
- Collaborated with a 4–5-person team to build an Amazon-style e-commerce clone using React, Redux, and Firebase Firestore; owned Login/registration, Firestore config, AuthContext, cart page, and Redux slices.

PROJECTS

Multi-Module Enterprise E-Commerce Platform Java 11, Servlet API, JSP, JDBC, Maven, MySQL

- Architected a 3-module Maven application (online-store-core for business logic/services, online-store-persistence for the DAO layer, online-store-web for Servlets/JSP) with clean separation of concerns, enabling independent builds and testing per module.
- Engineered a custom JDBC data access layer supporting multiple connection-pooling strategies (HikariCP, Apache Commons DBCP2, C3P0), avoiding ORM overhead while maintaining data integrity across entities including users, products, categories, carts, and orders.
- Implemented session-based authentication with server-side validation (email uniqueness, password matching, minimum-length + special-character password strength rules), plus a customer support ticketing system with priority and request-type classification.
- Integrated Java ResourceBundle-based i18n across all JSP views for seamless English/French switching and added automated OWASP dependency-check scanning into the Maven build to catch known vulnerabilities (CVEs) in dependencies.

Fit-Me – AI-Powered Smart Try-On Shopping Platform ([demo](#)) (Team Graduation Project) Node.js, Express, MongoDB, Flask, Python, MediaPipe, Socket.io, Cloudinary

- Built the Node.js/Express backend for a 3-service e-commerce platform (Node.js backend + Flask AI microservice, alongside a Next.js frontend built by teammates), implementing JWT authentication, bcrypt password hashing, and Nodemailer-based password recovery.
- Integrated the Hugging Face Kolos-Virtual-Try-On model for photo-based AI garment fitting and designed a 3D asset pipeline serving .glb models via Cloudinary alongside a Gemini-powered conversational AI stylist.
- Debugged and fixed the glasses overlay rendering in the team's Flask/MediaPipe AI microservice — diagnosing that the source asset's foreshortened product-photo perspective couldn't support realistic homography-based warping, and redesigning the approach around a full-image warp anchored to face-edge landmarks.
- Built real-time features with Socket.io: collaborative fitting rooms syncing AI try-on results live between users, and a live support chat system connecting users directly to the admin dashboard.

EDUCATION

B.Sc. Computer Science — Faculty of Science, Cairo University

2022 – 2026

Relevant Coursework: Software Engineering, Database Systems, Artificial Intelligence (Logic & Expert Systems), Compilers & Language Processing (ANTLR), Cryptography & Network Security, Computer Graphics (JOGL).

CERTIFICATES & COMPETITIONS

ICPC ECPC 2024 Honorable Mention – Egyptian Collegiate Programming Contest

Recognized for competitive algorithmic problem-solving at the national level.

DevWave Internship Certificate – React Developer | August 2025

Completed a 1-month software engineering internship focused on front-end development using React, Tailwind CSS, and Redux Toolkit.

ITIDA Gigs Freelance Training (EYouth) | October 2025 – January 2026

Completed a 3-month intensive program focused on freelance business management, client communication, and project delivery within the IT sector.

LANGUAGES

Arabic – Native

English – Intermediate (B1), **EF SET Certified**
